

35362001 is a Support Foot for use when a Wet Room floor falls away (drain angle) and the glass panel doesn't as its level in all planes. The glass then floats above the floor at the far end and needs the extra support.

35362101 is a Support Foot and is an optional extra for use with Wet Room screens. It is designed to ensure extra support around the glass panel. (Please note you cannot screw through this part into a tanked floor as it will breach the integrity of the tanking).
